

Press Release: High Point, NC – March 13, 2014

## Smart Spun® - rPET specifically designed for Nonwovens

Kilop USA, Inc, a minority and woman owned business, is pleased to announce the availability of Smart Spun®; a 100% recycled PET fiber specifically designed for the high speed demands of nonwovens carding equipment. This USA produced fiber is available with certification of the post-consumer supply chain and is available in 1.2 and 1.5 denier staple fiber size. Recognizing the demanding value expectations of the nonwovens industry, Smart Spun® is competitively priced so it isn't cost prohibitive like other recycled fibers. The company expects to see broad acceptance, especially in the industrial spunlace wipes markets, where customers have been looking for an environmental friendly solution to fiber needs.
